STUDENT TECH CLASH 2026 · AI ON CAMPUS

LostSignal

Nobody gets lost in silence.

Kuzey · Irem · Arca · Kerem · Politecnico di Torino

Analysis 1 · 200 students · the professor asks:

"Any questions?"

Silence.

THE PROBLEM

Silence doesn't mean they understood

Too embarrassed

Nobody wants to be the one who didn't get it in front of 200 people.

Can't put it into words

The doubt comes out messy: "why is it like that??"

Don't know what they missed

"I didn't get anything." The real gap is invisible, even to them.

THE SOLUTION

How LostSignal works

1

Ask

Anonymous, in your own messy words. Optional: pick the professor's PDF or snap the board.

2

Diagnose

The agent asks 1–2 short questions to find what is really unclear.

3

Clarify

"Is this what you mean?" One clear question, with the page it comes from.

4

Confirm

The student says yes or corrects it. Same doubt already asked? They decide: +1 or new.

5

Answer

The professor answers when they choose. The student is asked: "Did you understand?"

LIVE EXAMPLE

A real moment: Lecture 12

Student

"i didnt get this theorem, the derivatives one"

LostSignal

Which theorem? Fermat · Rolle · Lagrange · Cauchy · Something else

Student

Rolle

LostSignal

Is this what you mean? **"Why does Rolle's theorem need f(a) = f(b)?"** · Page 19

FOR THE PROFESSOR

The professor sees the room

Clear questions

Anonymous, clarified, with the page they refer to. Sorted by how many students ask.

On their schedule

Answer after a topic, at the break, or at the end. Nothing interrupts the lecture.

Same thread

"Still unclear" comes back under the same question, like an email reply.

Weekly report

What the class didn't understand, and where to look again.

FOR THE STUDENT

Each student finds their own gaps

My questions

Pending → answered → "Did you understand?" Yes closes it; no sends a follow-up.

What am I missing?

Pick past questions. The agent finds weak spots, the root gap and what to review first.

Brief for any AI tutor

A ready prompt that tells your AI tutor exactly what you're missing.

Private: stored under the student's own code. The professor never sees it.

WHAT'S NEW

Why not a poll, or a chatbot?

	Polls, Q&A tools, chatbots	LostSignal
The question	Shown exactly as typed	Diagnosed and clarified with the student
Material	None, or generic knowledge	The professor's own PDF, with the page
Reach	One student, one chat	The whole class, grouped, to the professor
After the answer	Nothing	"Did you understand?" + follow-up thread
Over time	Forgets	Private profile: your weak spots

TECHNICAL

Under the hood: a controlled agent

LLM decisions

Clear, vague or ambiguous? Ask again, clarify, reject, or propose a merge.

Actions

Diagnose · cite the page · queue · +1 · follow-up thread · profile · report

Memory

Shared anonymous queue · private per-student history · every step logged

Guardrails in code

Moderation · on-topic only · never answers · never invents · no merge without consent

Real material

Syllabus + professor's PDFs + student's photo or PDF

Stack

Python · Streamlit · OpenAI gpt-4o-mini + moderation

ETHICS

Built to be trusted

Privacy

- No recording of the lecture
- Anonymous to the professor
- Profile stays with the student
- Nothing affects grades

Helps them think

- Never gives the answer
- Never invents lecture content
- The student finds their own question

Who's left out

Students without a device. It runs in any browser, and the professor can still take questions out loud.

SUCCESS MEASURES

How we'll know it works

Questions per lecture

vs. hands raised today

"Yes, that's it"

share of clarified questions students confirm

"I understood"

share of answers closed without a follow-up

Gaps that shrink

weekly-report topics that improve over the weeks

LEVEL 3 · CAMPAIGN

Launch at Polito

Who

First-year students in large lectures, and their professors.

Where

A QR code on the first slide of every lecture, Polito mail, student representatives.

When

Week 1 of the semester, then again before mid-terms and exams.

Goal

After one month, every student in a pilot course has asked at least once.

Tagline: **"Nobody gets lost in silence."**

A silent lecture becomes an interactive one.

Nobody gets lost in silence.

Kuzey · Irem · Arca · Kerem — Thank you
